

Anaphylaxis Treatment Annual Notification to Parents

California Education Code 49414 requires school districts to provide epinephrine auto-injectors to trained personnel to use to provide emergency medical aid to persons suffering from an anaphylactic reaction.

Anaphylaxis is a rapid, severe allergic response triggered by insect stings, foods, medications, latex materials, exercise, or in rare cases by unknown causes. This is a life-threatening allergic condition, requiring immediate treatment. Administering epinephrine to students during a medical emergency may help to insure the student's health and safety at school. Therefore, the Nevada Joint Union High School District has adopted a policy for giving life-saving epinephrine to students in need of such treatment.

This policy states that a credentialed, licensed school nurse or trained, unlicensed school staff, under the direct or indirect supervision of the credentialed school nurse (or supervisor of health), may administer epinephrine in the form of an Epi Pen during a severe, life-threatening allergic reaction. The Epi Pen rapidly delivers a pre-measured, sterile, single dose of epinephrine by direct injection through the skin.
